Electronic Payments with access and bookings

Access control with remote payments unlocks a new era of convenience, automation, and revenue assurance — without the need for NFC readers, physical tickets, or on-site staff. Using the OpenItem Access Control app, users simply select, book, and pay for access or service directly from their mobile device.

Once payment is processed, they receive a secure digital credential — such as a QR code or PIN — that grants entry during their allocated time. With advanced features like facial recognition payments — completely cardless and phoneless — students can make safe, instant purchases, while guests, staff, and contractors enjoy frictionless entry and amenity access.

TYPICAL PAYMENT WORKFLOW

 CONTRACTOR AND STAFF ONBOARDING	Enable fast, secure, and paid access for contractors or temporary staff. A once-off fee (typically R50–R100 per person) can be collected before issuing temporary credentials — perfect for estates, commercial sites, and hospitality environments.
 SHORT-TERM RENTALS	For high-end properties in places like Zimbali or luxury hotels, guests can prepay for their stay (e.g., R1,000) and receive instant, app-based access to the property — no keys, no reception desk.
 CONSERVATION FEES	In wildlife estates such as Welgevonden or Madikwe, users can prepay park access fees via the app. Payments can be split automatically between the lodge and the park board, ensuring transparent revenue sharing.
 AMENITY ACCESS	Whether it's walking trails, mountain biking routes, fishing dams, or gym facilities (e.g., at Avianto), users can pay per-use or per-day to unlock access — driving engagement and monetizing your amenities.
 TRAFFIC FINES	Secure, high-value payment handling — from small estate violations to legal fines — is managed within the app, offering accountability and convenience to both users and administrators.
 EVENT MANAGEMENT & FOOD PRE-ORDERS	Hosting a fun run, market day, or estate event? Integrate with Jotform and Payfast to allow families to book tickets, pre-pay for food (burgers, boerie rolls, chips, cooldrinks), and receive access and vouchers — all from one streamlined platform.
 PARKING ACCESS	Combine app-based access with facial recognition and Bluetooth for seamless vehicle entry and exit — whether for guests, residents, or VIPs.

From secure property access and event management to conservation fees, school payments, and smart parking, OpenItem streamlines access control and payment collection through one unified mobile app.

Built for estates, schools, hospitality, and commercial spaces, it boosts efficiency, cuts overhead costs, and delivers exceptional user experiences. Whether managing contractors, enabling facial recognition payments, or unlocking amenities on demand, OpenItem simplifies operations, drives engagement, and unlocks new revenue—securely and effortlessly.
