

Autonomous entry, attendance and occupancy management.

Control ID is a an affordable entry management solution designed for sites that need powerful access control without the complexity of a full traditional installation.

Built around intelligent edge devices and a dedicated dashboard, Control ID gives organisations a modern way to manage people entering and moving through their facilities. It supports facial, QR and card credentials, SIP intercom communication, anti-passback, time and attendance, occupancy monitoring and evacuation support in one simple system.

Control ID can operate independently or integrate with the wider Openitem platform, making it suitable for both new installations and customers who want to extend their existing access control environment. With self-provisioning and support for third-party device acquisition, Control ID gives businesses flexibility, speed and control from day one.

acquisition

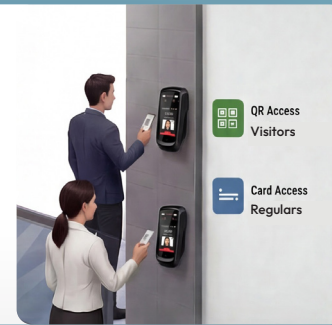

Up to 100K Faces

Supports up to 100,000 facial users, providing fast, contactless access for high-volume environments.

QR / Card Access

Supports QR and card credentials for staff, visitors, contractors and temporary access needs.

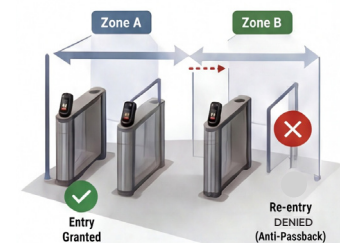

SIP Intercom

Enables voice communication at entry points before access is granted by authorised personnel.

Anti-Passback (APB)

Prevents repeated credential use across facial, QR and card access methods.

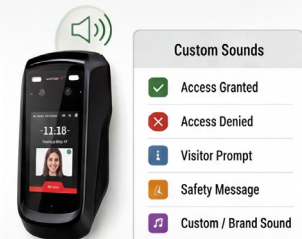

Standalone / Integrated

Operates independently with its own dashboard or integrates with the wider Openitem platform.

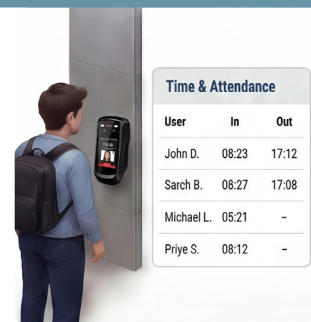

Custom Sounds

Allows custom audio prompts for access events, visitor guidance and site-specific instructions.

Time and Attendance

Records entry and exit activity to support workforce attendance and contractor reporting.

Zone Occupancy

Tracks movement across defined zones to show how many people are currently present.

Evacuation Handling

Provides on-site visibility to support emergency roll-call and evacuation management.

Self-Provisioning Third-Party

Supports compatible third-party device acquisition, provisioning and management through the dashboard.

A complete solution for access, attendance, occupancy and evacuation, available standalone or integrated with Openitem for enhanced security and operational visibility.
