A STAND-ALONE SOLUTION
POWERED BY

Wytrack at a Glance

Intelligent vehicle and asset tracking that gives estates, security teams and delivery operations complete visibility from entry to exit.

Wytrack by Openitem is an intelligent vehicle and asset tracking platform designed for estates, delivery operations, contractors and operational fleets. It provides real-time visibility of vehicle movements, helping security teams, control rooms and operational security managers improve oversight, coordinate daily activities and respond quickly to unexpected events.

Trackers communicate with the Wytrack web dashboard and mobile application, providing live vehicle locations, historical journey playback, geofence monitoring and configurable alerts. Whether monitoring delivery vehicles, contractor fleets, maintenance teams or valuable mobile assets, Wytrack delivers one central platform for tracking movement across estate environments.

Live mapping, ninety days of route history, planned versus actual journey comparison and off-route notifications provide valuable operational insight. Residents can receive automatic courtesy notifications as approved delivery vehicles approach their homes, while security teams monitor activity, investigate incidents and generate detailed operational reports.

Tracking that Fits Every Operation

Different operational environments require different tracking solutions. Delivery vehicles, contractor fleets, maintenance teams, golf carts, generators, trailers and valuable mobile equipment all present unique monitoring requirements. Wytrack offers a range of magnetic and portable tracking devices designed to support these different deployment scenarios.

Select the most appropriate tracker together with the preferred reporting mode to balance location update frequency, battery endurance and operational visibility. Intelligent, Timing and Power Saving modes allow organisations to optimise reporting according to delivery schedules, operational activity and asset usage. Combined with 4G LTE connectivity, stored location fixes and configurable notifications, Wytrack delivers reliable visibility across modern estate and fleet operations.

A dedicated Wytrack Dashboard

The web dashboard and mobile app bring asset location and movement information into one tracking service. Owners can follow current activity, review previous journeys and monitor configured boundaries from an office or while away from the site.

The product page describes the following operational capabilities:

Live asset locations on a map

Movement history covering ninety days

Routes, recorded speeds and stopping times

Geofence entry and exit notifications

Device alerts according to tracker model

Exportable movement reports

Web dashboard and mobile app access

This view helps answer practical questions: Where is the vehicle now? When did the trailer leave? How long did the asset stop? Which boundary was crossed? Movement records provide a starting point for investigation and response.

The accompanying dashboard and iPhone graphics illustrate a proposed presentation of these capabilities. Screen layouts, buttons, asset identifiers and displayed activity are concept designs using sample data, rather than verified screenshots of the live Wytrack application.

Live Asset Location

Wytrack displays tracked vehicles on a live map through its web dashboard and mobile app. Positions refresh approximately every ten seconds while vehicles are moving. Satellite positioning and cellular location services provide estates and control rooms with real-time visibility, helping security teams monitor vehicle movements and respond quickly when operational attention is required.

Ninety Day Route Playback

Wytrack stores ninety days of movement history, allowing estates to replay journeys, review stops, dwell times and recorded speeds. Compare planned routes with actual travelled routes, investigate deviations and generate exportable reports that support operational reviews, delivery investigations and security incident analysis.

Geofence Notifications

Create geographical boundaries around estates, delivery zones, loading areas or operating sites and receive push or SMS notifications whenever tracked vehicles enter, leave or travel off route. Geofence and route deviation alerts help security teams identify unexpected movement quickly and respond with greater operational awareness.

Movement and Tamper Alerts

Selected trackers detect vibration, movement, removal, opening, abnormal noise, low battery and geofence events. Detection capabilities vary by tracker model, allowing estates to select the most appropriate device for different operational requirements while improving asset visibility and supporting timely security responses.

OpenItem integrated Tracking Service

Wytrack operates as a dedicated tracking platform without requiring additional Openitem modules. Estates can monitor individual vehicles or entire delivery fleets through a single web dashboard and mobile application, providing real-time location, movement history, alerts and reporting within one secure tracking environment.

Multi Delivery Route Planning

Wytrack enables operators to create and distribute multi-stop delivery routes directly to drivers before arrival at an estate. Security teams can monitor planned versus actual travel, identify route deviations, improve delivery efficiency and maintain greater visibility of vehicle movements throughout the entire delivery journey.

Configurable Battery Modes

Timing, Intelligent and Power Saving modes allow estates to balance reporting frequency with battery endurance. Reporting intervals can be configured according to delivery schedules, operational requirements and movement patterns, helping maximise battery life while maintaining the visibility needed for effective vehicle monitoring.

- Timing Mode**
Scheduled updates
- Intelligent Mode**
Adaptive reporting
- Power Saving Mode**
Extended battery life

Estimated Battery Life
7 - 180 Days

Cellular Reporting And Stored Fixes

Trackers communicate using integrated 4G LTE connectivity and automatically store location fixes whenever mobile coverage becomes unavailable. Stored positions are uploaded once connectivity returns, preserving complete journey history. The long-life magnetic tracker also supports 2G fallback where available for improved reporting reliability.

Doorbell Courtesy Notification

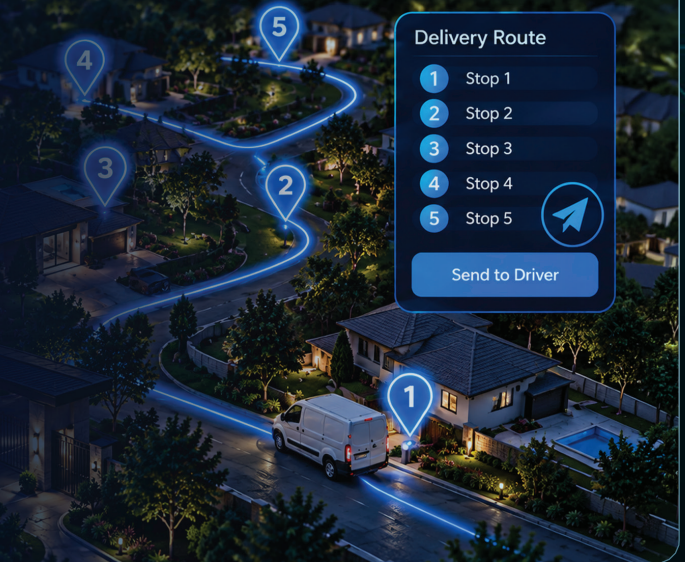

Wytrack can automatically notify residents when a tracked delivery vehicle enters a predefined proximity around their property. Courtesy notifications improve communication, reduce uncertainty and provide residents with advance notice of approaching deliveries, creating a smoother and more convenient estate delivery experience.

Magnetic and Portable Hardware

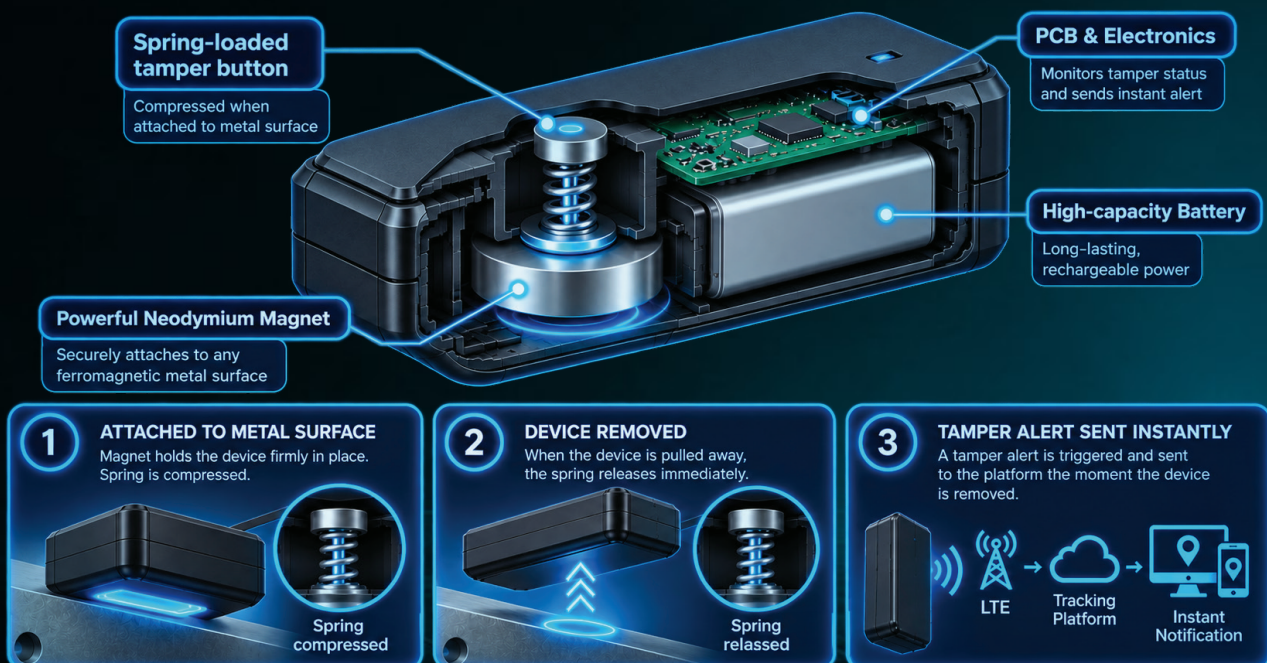

Choose long-life magnetic trackers for temporary vehicle deployments or portable rechargeable units for flexible installations. Magnetic mounting eliminates permanent vehicle modifications while multiple tracker sizes, battery capacities and environmental protection ratings allow estates to deploy the most suitable device for every operational requirement.

Tamper-Proof by Design

Wytrack combines a powerful neodymium magnetic mounting system with an intelligent spring-loaded tamper detection mechanism to protect valuable vehicles and mobile assets. When securely attached to a metal surface, the internal spring remains compressed while the tracker continuously reports its location through the tracking platform. If the device is removed or tampered with, the spring instantly releases, allowing the onboard electronics to detect the event and immediately transmit a tamper alert via the cellular network. Combined with long battery life, rugged weatherproof construction and installation that requires no vehicle wiring, the system provides reliable asset protection, rapid incident notification and greater confidence that every tracked asset remains exactly where it should be.

Flexible Deployment Options

Standalone deployment

Begin with a dedicated Wytrack account and one or more supplied trackers. This model suits private owners, businesses and estates that need location monitoring without adopting another Openitem module. Select long life or portable devices to match the assets being monitored.

Integrated Openitem deployment

For the estate workflow described on the product page, portable trackers are associated with booked visits in the Guard app. Routes, restricted areas and time windows give the control room context for alerts. Confirm the required Openitem modules and configuration with the supplier.

Phased deployment

Start with a representative group of assets and review reporting frequency, charging intervals and alert handling. Add units as the operating model becomes established. A mixed deployment can combine long life trackers on stored equipment with portable units for vehicles and temporary gate loans.

DEPLOYMENT

A Straightforward Deployment Journey

For an estate deployment, also agree the booking, issue, monitoring and return process.

The customer journey starts at one unit and can expand across a fleet. Account preparation is supplied by Openitem; customer self-provisioning is not claimed on the product page.

Practical Applications

FLEET AND LOGISTICS MANAGEMENT

Monitor multiple delivery vehicles using planned routes, live tracking, replay reporting and operational performance insights daily.

VISITOR AND CONTRACTOR TRACKING

Issue portable trackers to visitor and contractor vehicles, linking journeys with visitor records for complete accountability.

ESTATE OPERATIONS AND SECURITY

Track security patrols, maintenance vehicles and operational assets through one central dashboard with live visibility alerts.

ESTATE DELIVERY MANAGEMENT

Monitor delivery vehicles entering estates, tracking live locations, planned routes, resident notifications and secure, efficient deliveries.

PLANT AND MOBILE EQUIPMENT

Track generators, trailers, construction equipment and valuable mobile assets using geofence alerts and operational visibility.

HIGH-VALUE ASSET MONITORING

Protect portable equipment, temporary assets and valuable inventory with rechargeable trackers providing live location history.

The Wytrack Advantage

FOR ESTATE MANAGEMENT

Gain complete visibility of delivery vehicles, contractors and operational assets across the estate from a single platform.

FOR SECURITY AND CONTROL ROOMS

Respond faster to unexpected vehicle movement, route deviations and geofence events. Live visibility, historical journeys and automated alerts.

FOR OPERATIONS TEAMS

Plan delivery routes, monitor vehicle progress and compare planned versus actual journeys from one dashboard.

FOR RESIDENTS

Receive automatic notifications when approved delivery vehicles are approaching your property, providing greater convenience.

FOR SERVICE PROVIDERS AND DELIVERY FLEETS

Provide estates with greater transparency by sharing live delivery progress, following approved routes and improving arrival communication.

Capability Summary

Live Mapping	Live vehicle locations refreshed approximately every ten seconds while moving.
Historical Playback	Ninety days of route history with planned versus actual journey comparison.
Geofences & Off-Route Alerts	Push and SMS notifications for boundary crossings and route deviations.
Device Alerts	Movement, battery and model-specific tamper detection with notifications.
Web & Mobile Platform	Live tracking, reporting and alerts through the web dashboard and mobile app.
Openitem integrated Platform	Dedicated tracking platform with no additional Openitem modules required.
Doorbell Notifications	Automatic resident notifications when vehicles approach their homes.
Magnetic & Portable Hardware	Rechargeable magnetic and portable trackers without permanent installation.
Configurable Battery Modes	Timing, Intelligent and Power Saving modes balance reporting frequency.
Cellular Reporting & Stored Fixes	Offline position records uploaded when network connectivity returns.
Multi-Delivery Route Planning	Planned delivery routes distributed to drivers with live route comparison.
Estate Operations	Monitor delivery and operational vehicles through one central tracking platform.

Why Wytrack?

Wytrack combines independent cellular trackers with a service for live location, history and alerts. It helps owners monitor assets beyond a fixed entrance, including equipment that moves between sites or spends long periods in storage.

Choose the hardware and reporting mode around the asset. Use the standalone platform for focused tracking, or discuss the described Openitem estate workflow when visitor accountability and gate operations need to be connected.
